

LONG RACE KIT

POWER, BRAKES & SEQUENTIAL GEAR BOX

SEAT Sport has developed a new LEON SC version, the LEON SC Long Race (LR). This new model has the basis of the Leon SC, but has performed the following three kits with: engine power, brakes and sequential gear box.

The new vehicle with these three kits will be commercialized with the following references:

-V8PS000000 SUPER COPA LEON 2011 LR. It is the complete version including the three kits before commented.

The price of this vehicle is 83.100€ + 18% IVA. (Exworks)

- V8PS000001 SUPER COPA LEON 2011 - 330. It is the Leon SC version with the power and the brake kit. The vehicle will maintain the DSG gearbox and it is completed with the 330 Hp and the brakes with better improvements.

- The price of this vehicle is 68.400€ +18 % IVA. (Exworks)

These are the following kits:

-Engine. Based on the same current motor, has made a new application that develops 330 hp.

-Brakes LR. It is the perfect complement to the new power of the vehicle. With this new kit, we are improving the performance of the brakes of the vehicle. Moreover, the new calliper allows brake pads thicker than the current one. With this new solution, you can do more km with the same pad. This solution is a good choice for endurance races or 24 hours.

-Sequential Gear Box. In addition to the DSG gear shift, the new cars can be mounted with a sequential gearbox with a traditional gear shift. The new gearbox reduces front-end car weight (± 40 kg). This improves the set-up of the car as well as better into-curve performance. The new gearbox provides better engine retention, therefore assisting in braking. Initially, the gearbox is manufactured with two ratios, a long ratio (max. ± 240 km/h) and a short ratio (max. ± 170 km/h).

And commercially available as indicated below (power and brake kit can not be sold separately)
