

León Supercopa MK2

POWER and BRAKE KIT

SEAT Sport has developed a new LEON SC version, the LEON SC Long Race (LR). This new model has the basis of the Leon SC, but has performed the following aspects:

- Engine power. Basis in the current engine, there is new electronic application with 330 Hp.
- Brakes LR. It is the perfect complement to the new power of the vehicle. With this new kit, we are improving the performance of the brakes of the vehicle. Moreover, the new calliper allows brake pads thicker than the current one. With this new solution, you can do more km with the same pad. This solution is a good choice for endurance races or 24 hours.

The new vehicle will be commercialized in 2 possible finishes:

- **V8PS000001** SUPER COPA LEON 2009 – 330Hp. It is the Leon SC version with the power and the brake kit. The vehicle will maintain the DSG gearbox and it is completed with the 330 Hp and the brakes with better improvements. **Available. PVP: 68.400€**

On the other hand, SEAT Sport will also have available all these elements in order to transform the current Leon SC. In this case, we will maintain the same philosophy we had with the produced cars. That means that the power kit will be always joined to the brake kit.

The parts delivered that have to be fitted in the cars to transform them are:

POWER and BRAKE KIT
